Local Technology Firm Expands and Receives Special Honor from Microsoft

FORT WAYNE, Ind. (December 1, 2009)—Enhanced Network Solutions Group (ENS Group, Inc), one of Northern Indiana’s leading technology consulting firms, has recently added three additional team members and received a special honor from Microsoft.

Joining ENS Group as Vice President of Operations is Jason Wardwell. Wardwell will be responsible for ensuring ENS Group clients continue to receive the highest level of technology services available in this region. His most recent position was Director of Facilities and Technology for Marion Community Schools.

ENS Group continues to grow its robust Cisco infrastructure and IP telephony voice practice with the addition of Rick Long as Integration Specialist. Rick’s background includes managing and supporting a 45-site Cisco IP telephony installation.

Brian Lang joins the ENS Group team as Business Development Manager. Lang joins ENS with ten years of experience serving enterprise-level accounts throughout the Midwest.

In addition to announcing our exciting growth and job expansion for this region, ENS is pleased to announce that we have also been nominated and awarded the honor of membership in the new Microsoft US VAR Champions Club. This opportunity is reserved for and designed to recognize selected partners who have demonstrated revenue growth and impacted their regions with consistent engagement and continued commitment to growing their Microsoft practice.

Andrew McNulty, Microsoft’s Midwest Area Partner Territory Manager states, “This new program is designed to recognize and reward our top VAR partners for their commitment and impact in the marketplace. Congratulations.”

“Based on ENS Group’s performance, including revenue contribution, consistent deal flow, and continued engagement with Microsoft, we have been identified as a Microsoft partner that drives significant impact in our community. As a Gold Certified Microsoft Partner in the Microsoft US VAR Champions Club, our organization stands out among our peers for our achievements as a Microsoft partner,” said Matt Gerber, President of ENS.

As part of its core philosophy, ENS not only strives to inform, design, and implement solutions that effectively use advanced IT strategies and innovations in our community, but its goal is also to educate and train technology leaders and IT staff on these technologies so organizations can truly leverage and use them to their fullest.

ENS conducts informative seminars twice monthly covering a variety of IT topics. The most recent seminars informed IT managers in new technologies available from Microsoft surrounding Windows 7, Windows 2008 R2 Server, and Exchange Server 2010. These free seminar sessions bring incredible value and insight into helping area organizations identify new technology trends that will support their businesses.

Since 1995, ENS has successfully helped its clients improve operationally by adopting and leveraging information technology. “We take great pride and spend many development hours being hometown and regional experts with global expertise,” said Mr. Gerber. “Some organizations don’t realize that Fort Wayne has a local technology firm with the depth of knowledge and level of partnerships, specializations, and authorizations with technology innovators like VMware, Cisco, and Microsoft. Not only do we support hundreds of companies around Fort Wayne, but we have clients with sites as far away as Europe and the Seychelles Islands.”
