Local Technology Firm Promoted to VMware Enterprise Solution Provider

FORT WAYNE, Ind. (September 08, 2009)—Enhanced Network Solutions Group (ENS Group, Inc), one of Northern Indiana’s leading technology consulting firms, has recently been promoted by VMware to an Enterprise Solution Provider. ENS is the only firm in the Fort Wayne area to achieve this status.

As virtualization is now a critical component to an overall IT strategy, it is important for organizations to choose the right virtualization software vendor, platform, and implementation partner. Virtualization is a proven technology that is transforming the IT landscape and changing the way that people compute. Today’s powerful computer hardware was initially designed to run a single operating system and often a single application; thus, leaving many machines underutilized. Virtualization lets you run multiple virtual machines on a single physical machine, sharing the resources of that single computer across multiple environments. VMware is the leading virtualization provider, offering the most trusted and reliable platform for building virtual infrastructure environments.

ENS understands the increasing demand for flexibility and virtualization, as well as the increased requirements for storage provisioning, availability, and performance. “This recognition by VMware emphasizes that Fort Wayne has a distinguished leader in the growing virtualization server industry,” said Matt Gerber, President of ENS. “We are committed to helping companies in our community expand their storage and virtualization solutions, including the need for disaster recovery and business continuity plans that are affordable and deployable.”

According to VMware, Enterprise Solution Providers “add value by combining their technology expertise along with services to design, plan, and deploy sophisticated virtualization solutions to meet the technical and business needs of our customers. Enterprise Solution Providers demonstrate an extensive expertise in working with VMware technologies by earning the Infrastructure Virtualization Competency.”

As part of its core philosophy, ENS not only strives to inform, design, and implement solutions that effectively use advanced IT strategies and innovations in our community, but its goal is also to educate and train technology leaders and IT staff on these technologies so organizations can truly leverage and use them to their fullest. “As part of that mission, our company’s learning center offers training programs that are not only utilized locally, but also attract participants from surrounding regions and across the nation,” said Dave Shriner, training manager of ENS. “With our important partnership with VMware, ENS will also offer and deliver authorized VMware technical training.”

In addition to an extensive list of technology training courses, ENS conducts informative seminars twice monthly covering a variety of IT topics. The most recent seminar was about educating IT managers in how to make a strong business case for creating a disaster recovery plan and how virtualization can make it affordable. These free seminar sessions bring incredible value and insight into helping area organizations identify new technology trends that will support their businesses.

Since 1995, ENS has successfully helped its clients improve operationally by adopting and leveraging information technology. “We take great pride and spend many development hours being hometown and regional experts with global expertise,” said Mr. Gerber. “Some organizations don’t realize that Fort Wayne has a local technology firm with the depth of knowledge and level of partnerships, specializations, and authorizations with technology innovators like VMware, Cisco, and Microsoft. Not only do we support hundreds of companies around Fort Wayne, but we have clients with sites as far away as Europe and the Seychelles Islands.”
